Home Agent's Notes

By Mrs. B. G. Anderson
Home Demonstration Agent

For the benefit of those who did not get to the Home Demonstration Club Christmas Party last Thursday, I want to tell you that you really missed a very special affair. There were 93 members present, representing 15 of the 16 home demonstration clubs.

The program was beautiful and consisted of the following:

Singing of Christmas Carols;

Devotional and Christmas Story, by Mrs. Verna Conner;

Reading, "How Come Christmas" by Mrs. Kenneth Gregory.

The Oakville Home Demonstration Club put on a skit, showing the wrong way to conduct a meeting, which was greatly enjoyed by all.

Each member brought a gift for exchange, and some "love" gifts to put under the tree to be distributed at Christmas time.

After gifts had been exchanged, among the members—then came the big surprise—or it was to your home agent—when she was presented two pieces of beautiful luggage, your Christmas gift to her! Then the clubs each had a gift for our County Chairman, Mrs. R. K. Martin, and more surprises in the form of a lovely birthday cake for me.

Then came refreshments that were not only good to look at but delicious served from a beautifully decorated table carrying out the Christmas note. It was a wonderful party, because it represented cooperation and love of those who had a part in making it the success it was.

To express my sentiments, I would like to quote Dr. Norman Vincent Peale:

"Why does everything seem so beautifully different at Christmas time? Even among the jostling crowds on the city streets, a soft and kindly spirit is evident. The harshness and selfishness of everyday living is softened and modified by a pervasive spirit of good will.

"How may this be explained? Simply that the thoughts of men have turned, at least momentarily, to the kindliest, friendliest Person who ever lived. As our minds dwell on Him, He fills our hearts with His spirit of Love.

"So, for this one, wonderful day, the Christ-like spirit motivates mankind and the world becomes an exciting place of joy and happiness."

My sincere thanks and appreciation for having the privilege of working in such a fine county, with such wonderful people.

Protective Milk?

Don't be unduly optimistic, but watch with interest the development of a new "protective milk," say VPI specialists.

The milk, claim two researchers at the University of Minnesota (Dr. W. E. Petersen and Dr. Berry Campbell), may prove to be a major step in combatting disease.

Petersen and Campbell say they have established that:

(1) Cows' udders produce vast quantities of antibiotics capable of producing immunity to diseases which are pathogenic to man and other animals. The method used is to inject antigens of the various diseases into the udders of cows.

(2) Human beings, as well as other animals, may develop a passive immunity to a wide range of diseases through drinking the protective milk. Subject to this type of immunity are diseases caused by viruses, bacteria, certain mold and fungi, and pollen.

It is emphasized that the production of immunity factors in the cow's milk does not alter its composition or make it unnatural or abnormal in any way. No disease-producing organisms are introduced into the milk. It can be pasteurized and dried without destroying the immunity factors.

Commenting on this development, VPI specialists stress that a great deal of work must be done by other scientists either to substantiate or disprove the finidings of this research. The work done thus far has been carried on as a project, and none of the available for the public time.

If the original findings stanfiated, there will still many other problems to concerning such matters would produce such milk, production would be super so on.

If further research re original findings, the spec dairy science and public may count on the great since the work of Pasteur
